

AW10CT0201-51

Ultrasonic cleaning transducer can transform high-frequency electrical signals into ultrasonic energy and transfer the energy into the container. The water molecules will be excited to vibrate in a high-frequency and micro-jet also will come into being, thus realizing the non-contact cleaning.

Resonant frequency	$51 \pm 1.0 \text{ KHz}$	
Resonant impedance	$\leq 100 \Omega$	
Static capacitance	$1200 \pm 20\% \text{ pF}$	at 1000Hz/1V
Dielectric loss	$\leq 0.5\%$	$\text{tg}\delta$
Rating Power	7.5W
