

## AW11CT4535-28S

Ultrasonic cleaning transducer can transform high-frequency electrical signals into ultrasonic energy and transfer the energy into the container. The water molecules will be excited to vibrate in a high-frequency and micro-jet also will come into being, thus realizing the non-contact cleaning.

Resonant frequency	$28 \pm 0.5 \text{ KHz}$	
Resonant impedance	$\leq 20 \Omega$	
Static capacitance	$3800 \pm 20\% \text{ pF}$	at 1000Hz/1V
Dielectric loss	$\leq 0.5\%$	$\text{tg}\delta$
Rating Power	50W
