

AW11Y3515500A

Ultrasonic cleaning transducer can transform high-frequency electrical signals into ultrasonic energy and transfer the energy into the container. The water molecules will be excited to vibrate in a high-frequency and micro-jet also will come into being, thus realizing the non-contact cleaning.

Radial resonant frequency	42.0±3KHz	
Resonant impedance	≤15Ω	
Static capacitance	2000±10%pF	at 1000Hz/1V
D33	280x1.0E-12C/N	
Dielectric loss	≤0.4%	tgδ
