

AW16Y20120G2L15J5

Ultrasonic atomizing transducer is used for ultrasonic atomizer, is one of the main products of Audiowell. This product is made from the piezoelectric ceramic developed by ourselves, has the advantages of better temperature stability and superior piezoelectric effect. It also adopted an advanced membrane technology to protect the electrode, has a good acid and alkali-resistant performance.

Thickness resonant frequency	1.70±0.05MHz
Resonant impedance	≤2.0Ω
Static capacitance	1500±20%pF
Kp	≥0.45
Fog output	350ml/h
Mean time to failure	5000hrs
