Specificion for Piezoelectric Diaphragm	Drawing No.	Revision No.	Page
Model No.: MFT-15T-4.0AL11	KC3.001.013	1.2	3/8

1. Scope

This product specification is applied to the piezoelectric element used for sounder in alarm systems. Please contact us when using this product for any other applications than described in the above.

2.Model No.: MFT-15T-4.0AL11

3.Test Conditions

Product shall be measured under a condition (Temperature :+15 to +35°C,Humidity :45 to 85%R.H.,Atmosphere:86~106kPa)unless the standard condition (Temperature :+25 \pm 3°C,Humidity :60 \pm 10%R.H.,Atmosphere:86~106kPa) is regulated measure.

4. Maximum Rating

	Item	Specification
4.1	Maximum Input Voltage	30 Vp-p /max.
4.2	Operating Temperature Range	-20 ∼ +50 ℃
4.3	Storage Temperature Range	-20 ∼ +60 ℃

5. Electrical Characteristics

	Item	Specification
5.1	Resonant Frequency	4.0± 0.5 kHz
5.2	Resonant Impedance	500 Ω /max
5.3	Electrostatic Capacity (at 100Hz)	34nF ± 30%
5.4	Insulation Resistance (Mul t i met er)	20M $Ω$ min.

Refer to next item for measuring method.

Model No.: MFT-15T-4.0AL11	KC3.001.013	1.2	4/8

6. Measuring Method

6.1 Resonant Frequency / Resonant Impedance

Piezoelectric diaphragm shall be clamped at a node point as shown in following figure to be free from any mechanical stress, and measured its resonant frequency and resonant impedance by using vector impedance analyzer or equivalent.

When the input frequency is sweeped within 2 to 5 kHz, the resonant frequency is defined the frequency where the impedance shows minimum value, and this impedance shell be the resonant impedance.

6.2 Electrostasic Capacitance

A electrostatic capacity capacitance shall be measured at 100Hz by using L.C.R.meter, ex. HP4192A(H.P.), or equivalent. The part shall be clamped in the same way as the measurement of resonnant frwquency / resonant impedance mentioned in the above.

6.3 Insulation resistance

An insulation resistance shall be measured by using an insulation resistance meter.

Model No.: MFT-15T-4.0AL11	KC3.001.013	1.2	5/8

7. Physical Characteristics

	Item	Test Condition	Specification
7.1	Shock	Diaphragm shall be measured after being applied shock(980m/s²) for each three mutually perpendicular directions to each of 3 times by half sine wave.	The measured
7.2	Vibration Resistant	Diaphragm shall be measured after being applied vibration of amplitude of 1.5mm with 10 to55Hz band of vibration frequency to each of 3 perpendicular directions for 2 hours.	value shall meet Table 1.

8. Environmental Characteristics

			_	
	Item	Test Condition	Specification	
8.1	Dry Heat Test (Storage)	After being placed in a chamber with $+70\pm3\%$ for 20 hours and then being placed in natural condition for 4 hours, diaphragm shall be measured.		
8.2	Cold Test (Storage)	After being placed in a chamber with $-30\pm3\%$ for 20 hours and then being placed in natural condition for 4 hours, diaphragm shall be measured.		
8.3	Humidity	After being placed in a chamber with 95 \pm 5%R.H. at $+50\pm3^{\circ}$ C for 20 hours and then being placed in natural condition for 4 hours, diaphragm shall be measured.	The measured value shall meet	
8.4	Temperature Cycle	After being placed in a chamber at $-30\pm2^{\circ}$ C for 30 minutes, diaphragm shall be placed at room temperature($+20^{\circ}$ C). After 15 minutes at this temperature, diaphragm shall be placed in a chamber at $+70\pm2^{\circ}$ C. After 30 minutes at this temperature, diaphragm shall be returned to room temperature ($+20^{\circ}$ C) for 15 minutes. After 4 above cycles, sounder shall be measured after being placed in natural condition for 4 hours.	Table 1.	
8.5	The action under the high tempreture condition	Place the products in the condition of $+40\pm3^{\circ}\mathbb{C}$ 95±4% R.H. for 2 hours and test later.	Pass	
8.6	The action under the low tempreture condition	Place the products in the condition of $+60\pm3^{\circ}\mathrm{C}$ -10 $^{\circ}\mathrm{C}$ for 2 hours and test later.		

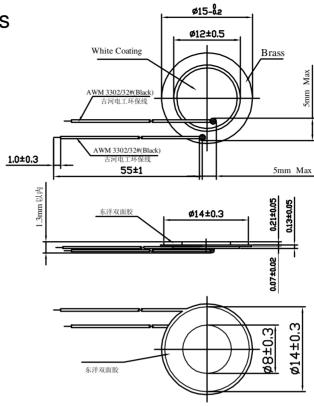

Remark: All the dependence test shows that there will not appear the dew on the surface of the elements.

Table 1.

	Item	Specification after test
1	Resonant Frequency	Initial Value ± 15%
2	Resonant Impedance	500 Ω /max
3	Electrostatic Capacity	Initial Value ± 30%
