

# **Three-Phase Brushless Motor Driver IC**

#### **Overview**

The LB1854M is a three-phase brushless motor driver IC and is optimal, in particular, for driving VCR capstan and drum motors.

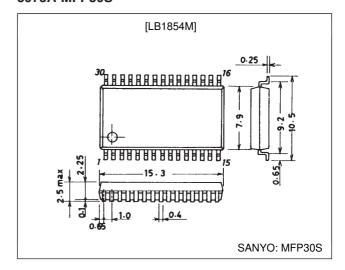

#### **Features**

- 120° voltage linear drive technique
- The LB1854M soft switching scheme allows smaller external capacitors to be used (e.g., chip capacitors).
- Built-in thermal-shutdown function
- Built-in overcurrent protection circuit
- Built-in FG amplifiers (operational amplifier and Schmitt amplifier)
- Control start voltage set by an external voltage
- The output current feedback level can be changed by changing the control gain to one of two levels.
