

KIA7905P/PI~ KIA7924P/PI BIPOLAR LINEAR INTEGRATED CIRCUIT

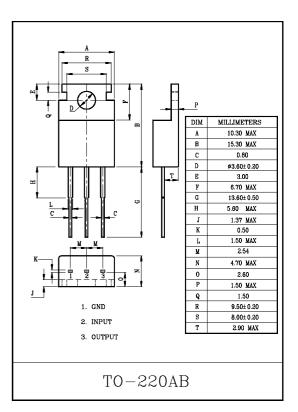

1A THREE TERMINAL NEGATIVE VOLTAGE REGULATORS -5V, -6V, -8V, -9V, -10V, -12V, -15V, -18V, -20V, -24V

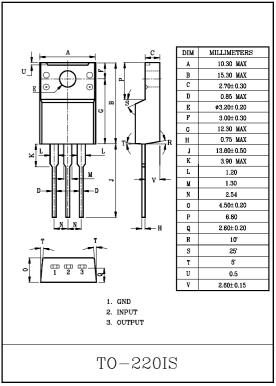

FEATURES:

- · Suitable for C-MOS, TTL, and the other digital IC power supply.
- Internal thermal overload protecting.
- Internal short circuit current limiting.
- Output current in excess of 1.0A.

MAXIMUM RATINGS (Ta=25℃)

TEST CIRCUIT

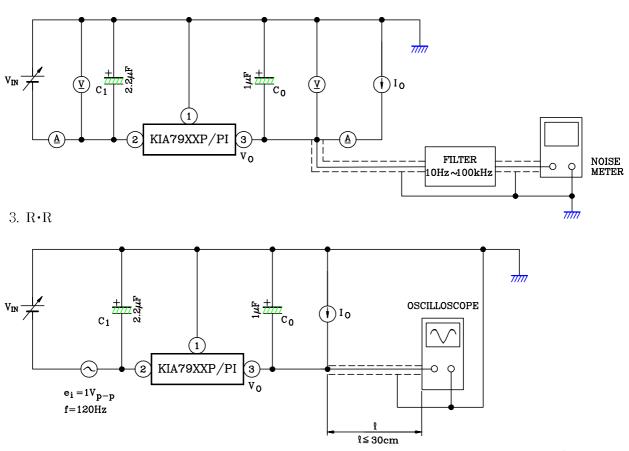

2. V_{NO}

1. Vout, Reg·Line, Reg·Load, I_B, Δ I_B, V_D, T_{CVO}

Notes : (1) To specify an output voltage, substitute voltage value for "XX"

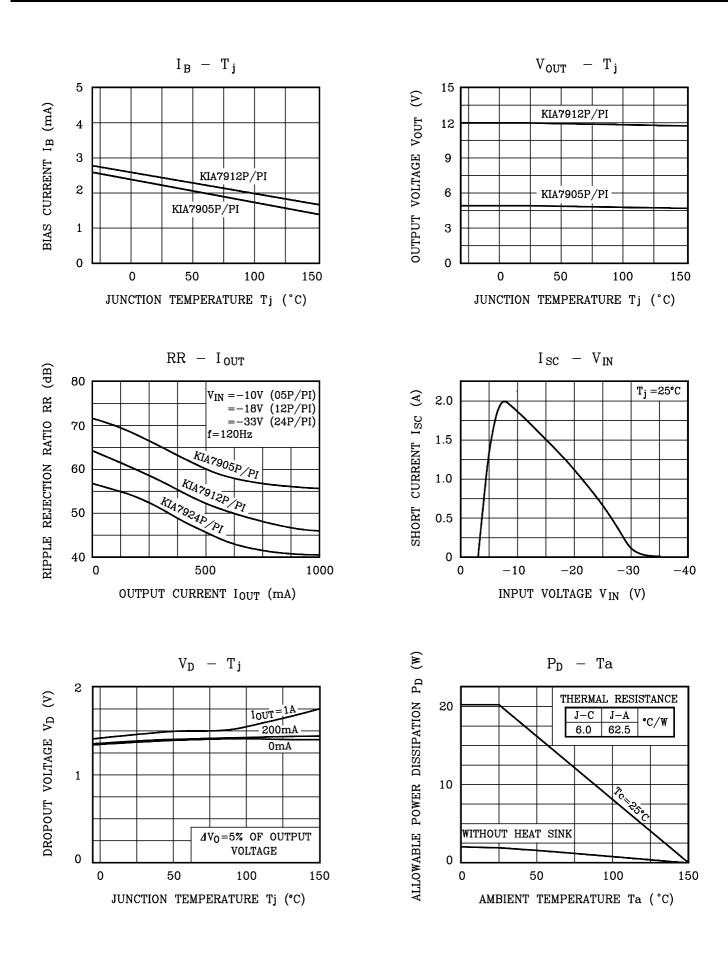

- (2) Required for stability. For value given, capacitor must be solid tantalum. If alumininum electrolitics are used, at least ten times value shown should be selected. C_I is required if regulator is located an appreciable distance from power supply filter.
- (3) To improve transient response. If large capacitors are used, a high current diode from input to output (1N4001 or similar) should be introduced to protect the device from momentary iput short circuit.

R.R.=20 log $\frac{e_i}{e_o}$ (dB)
