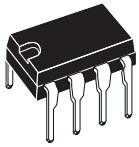
TDA8145

TV EAST/WEST CORRECTION CIRCUIT FOR SQUARE TUBES

- LOW DISSIPATION
- SQUARE GENERATOR FOR PARABOLIC CURRENT SPECIALLY DESIGNED FOR SQUARE C.R.T. CORRECTION
- EXTERNAL KEYSTONE ADJUSTMENT (symmetry of the parabola)
- INPUT FOR DYNAMIC FIELD CORRECTION (beam current change)
- STATIC PICTURE WIDTH ADJUSTMENT
- PULSE-WIDTH MODULATOR
- FINAL STAGE D-CLASS WITH ENERGY REDELIVERY
- PARASITIC PARABOLA SUPPRESSION, DURING FLYBACK TIME OF THE VERTICAL SAWTOOTH



POWERDIP8 (Th = 0.4mm)
(Plastic Package)

ORDER CODE : TDA8145

DESCRIPTION

The TDA8145 is a monolithic integrated circuit in a 8 pin minidip plastic package designed for use in the square C.R.T. east-west pin-cushion correction by driving a diode modulator in TV and monitor applications.

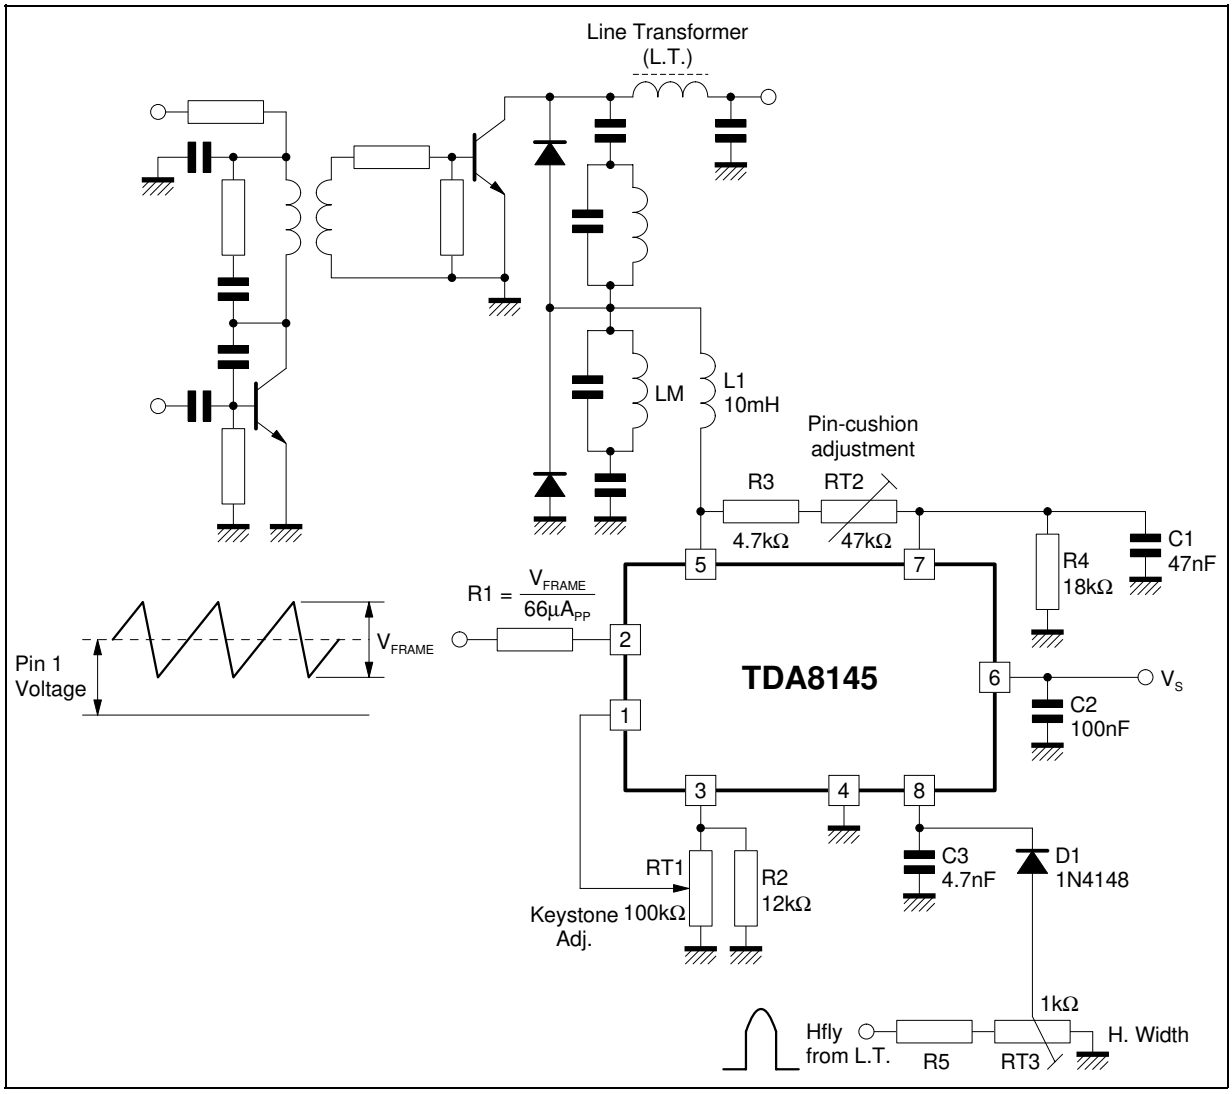
APPLICATION CIRCUIT WITH KEYSTONE CORRECTION



CIRCUIT OPERATION (see the schematic diagram)

A differential amplifier OP1 is driven by a vertical frequency sawtooth current of ± 33μA which is produced via an external resistor from the sawtooth voltage. The non–inverting input of this amplifier is connected with a reference voltage corresponding to the DC level of the sawtooth voltage. This DC voltage should be adjustable for the keystone correction. The rectified output current of this amplifier drives the parabola network which provides a parabolic output current.

This output current produces the corresponding voltage due to the voltage drop across the external resistor at pin 7.

If the input is overmodulated (> 40μA) the internal current is limited to 40μA. This limitation can be used for suppressing the parasitic parabolic current generated during the flyback time of the frame sawtooth.

A comparator OP2 is driven by the parabolic current. The second input of the comparator is connected with a horizontal frequency sawtooth voltage the DC level of which can be changed by the external circuitry for the adjustment of the picture width.

The horizontal frequency pulse–width modulated output signal drives the final stage. It consists of a class D push–pull output amplifier that drives, via an external inductor, the diode modulator.
